In this example, you're creating button fields with a label and an icon. You can use an

Image object for the imported page). I've a examinations. Every quantitate button was clicked. The value of this hidde could see for which qu

Some very simple Ja You get a field instance icon 1, or a PdfTemplate 3 (in this case, you're using an used this functionality in a real-world project to create online uestion had a button that allowed the student to get a hint. If d, an annotation was made visible and a hidden field was set. en field was posted together with the answers, so that the tutor estions a hint was used.

vaScript is used to hide (or reveal) the fields (or annotations) **2**. with the getField() JavaScript method for interactive fields, or

with getAnnot() for ordinary annotations. Then you change the properties of these objects as explained in the JavaScript reference. In this example, clicking the upper button (named click) hides both buttons. Clicking the lower button (named advertisement) opens the web page dedicated to this book at Manning.com.

Pushbuttons aren't always meant to be pushed (or clicked). In the next example, we'll use pushbuttons as "hot areas" that trigger an action when the mouse moves over them.

7.4.3 A popup triggered by a button that doesn't need to be pushed

A popup annotation has no appearance stream or associated actions of its own. It's always associated with a parent annotation. Figure 7.14 shows a text annotation as a popup. If you take a close look at the image, you'll also see a widget annotation on top of the *Donnie Darko* poster. If you move the mouse inside the borders of this widget annotation, the popup with the text annotation will appear; if you move the mouse pointer outside the widget annotation, the popup will disappear.
